

Economic Impact of Stroke Report 2024

State Snapshot:
Queensland

State Snapshot: Queensland

About the Economic Impact of Stroke Report

The Economic Impact of Stroke Report 2024 has estimated the health and economic impacts of stroke in Australia for the 2023 population. Our hope is that this report will inform conversations and evidenced-based decision-making about the allocation of resources to improve stroke prevention and treatment, and enhance recovery.

Stroke Foundation is proud to have partnered with Monash University to produce this report, and is grateful for the generous support of Boehringer Ingelheim, the Angels Initiative and Medtronic that enabled its development.

Whilst the report provides a national outlook, we have also produced a series of state and territory summaries.

For Queensland in 2023

There were
89,188 residents living
with stroke

There were
9,098 stroke events

171 per 100,000
residents experienced a stroke
(**176 per 100,000** in Australia)

The estimated stroke risk in Queensland

1,021,200 (23%)
High blood pressure

450,400 (10%)
Smoking

542,500 (12%)
Physical inactivity

2,854,000 (64%)
Overweight/obesity

463,000 (10%)
High cholesterol

290,800 (7%)
Diabetes

Cost of stroke to the Queensland economy

Economic modelling undertaken in the report estimates that for strokes that occurred in 2023, the economic impact on the Queensland economy will be \$3.2 billion over a lifetime. This equates to \$366,000 per person. In the first year following stroke, the cost is \$1.6 billion, which equates to \$178,000 per person.

\$1.1 billion
in healthcare costs for strokes occurring in 2023 including

Cost savings from the implementation of initiatives to save lives and enhance recovery

30/60/90 National Stroke Targets

In 2023, national leaders in stroke agreed to bold new targets to ensure Australians have access to timely, world-leading stroke care. The 30/60/90 National Stroke Targets (the Targets) are a group of metrics designed to drive quality improvement activities in the areas of stroke unit access and time-critical endovascular stroke treatments.

The Queensland Government has endorsed the Targets.

The improvements in outcomes, and cost savings, from Queensland achieving the Targets, was modelled using current national rather than state performance measures, and are outlined below.

Target	Number of minutes saved	DALYs avoided
1. Median endovascular clot retrieval door to puncture time <30mins for transfers	2,988	34
2. Median thrombolysis door to needle time <60mins	8,322	41
3. Median door in door out time for endovascular clot retrieval <60mins	19,124	220
4. Median endovascular clot retrieval door to puncture time <90mins for primary presenters	8,952	103
5. Certified stroke unit care provided to >90% of patients with primary stroke diagnosis		421
Total	39,386	819

With achievement of the Targets, **819 disability-adjusted life years (DALYs) were estimated to be avoided.**

Almost **\$5.5 million in savings** were estimated over a lifetime after a stroke with the improvements in provision of acute care. There were increases in costs related to healthcare services (\$4.8 million), which were offset by \$10.3 million in savings from improved productivity and reduced informal care needs.

The economic impact of achieving the Targets in Queensland is outlined below.

Improved access to community rehabilitation

After a stroke, the aim of rehabilitation is to regain function and achieve the greatest possible level of independence. There are many different pathways to receiving rehabilitation following stroke that include inpatient and community-based services. **In Queensland, the cost savings over a lifetime associated with improving the provision of community-based rehabilitation for patients after stroke were estimated to be \$24.1 million.**

\$24.1 million
in savings
by improving access to
community rehabilitation services
